WELCOME TO OKEANOS!

This is GRNET's cloud service, for the Greek Research and Academic Community. With okeanos you are one click away from your own Virtual Machines, Networks and Storage.

SO, WHAT IS THIS ~ OKEANOS THING ?

~okeanos is a brand new IaaS Service. "IaaS" stands for "Infrastructure as a Service", but what does it really mean?

It means that you can build your own computer, always connected to the Internet, without worrying about hardware failures, spaghetti cables, connectivity hiccups and software troubles.

With ~okeanos you are one click away from your own Virtual Machines and Virtual Networks: You can manage them, destroy them, connect to them and take a handful of other actions, all from inside your favorite web browser.

You can also store your files online, share them with friends and access them anytime, from anywhere in the world. You can also access them from inside your Virtual Machines.

Open Access to Research Data in Horizon 2020 webinar – Greek OpenAIRE NOAD

[Marina Angelaki](#) | [2017-05-15](#) | [country highlights](#) | [Add Reply](#)

On 22 March 2017, the [National Documentation Centre \(EKT\)](#) organized under its capacity as the Greek [OpenAIRE NOAD](#) a webinar focusing on open data in Horizon 2020 in collaboration with Sarah Jones from the [Digital Curation Centre \(DCC\)](#). The webinar's aim was to present the rules on open access to research data that apply to beneficiaries in projects funded (or co-funded) under Horizon 2020 and the services and tools that are available to beneficiaries that allow them to comply with these rules. The interest of the Greek research community in open access was confirmed by the high attendance levels and re-affirmed the added value of training and awareness-raising activities on the subject.
